driven with 300B SET amps. You'll be please with either one.

Constant directivity cornerhorns don't need flanking subs. But you still can't go wrong with one or two subs driven as distributed multisubs. If you have two, put them in opposite corners. They'll smooth lower frequency room modes while adding extension.

But you don't need subs to be satisfied with either model of constant directivity cornerhorn. Both sound great, even when driven by flea power amps.
