Subject: Power adaptor noise Posted by vhfspeeks on Sat, 10 Dec 2016 20:32:14 GMT View Forum Message <> Reply to Message

I mentioned this in another post, but the power adaptor for a pair of small speakers is making a soft but noticable high-pitched whine when the speakers are turned on. I replaced them, but the next one also has the same issue so I think it's a design flaw.

Are there any easy solutions to this, or should I just send back the next set and buy a different brand?
