Subject: Poll - SE / PP

Observation: Seems like fullrange speaker designers like SE amps and large scale speaker designers generally prefer PP tube amps. This includes 105db+ designs so it isn't just sensitivity. Ironically, many fullrangers are 95db and less. Questions: 1. Which do you generally like better, SE tube amps or PP amps? Why? 2. If biamping, would you rather have solid state or PP tubes for the woofer? Why?
