Hello, I am new to this forum. I do spend some time on the DIYAUDIO.com as well and have gone through a few projects there. I've built up a few sets of full rangers, Fostex and MarkAudio to name a couple. Using a DBX to play around with some bi-amping too. Really happy with those projects. I do have a few amps in use, EL84 tube stuff and some vintage Sansui's. recently picked up a match for my Rotel RB-850, so now I can run them bridged in a mono block setup to push up a few more watts than I'm used to playing with. With that comes the need to try my luck at some higher SPL stuff. Now on to my actual request....

"I quite like the Pi 3's and would love to get a set of plans to build a pair"

These should fit my budget and I've sourced some driver options here in Canada that can ship to me for free, leaving out some of the shipping issues we have to ultimately pay for up here... from down there.

I hope this is how its done on this forum?

Wayne
