Subject: Re: Peak Watts meaning Posted by Kingfish on Wed, 05 Apr 2017 18:19:48 GMT View Forum Message <> Reply to Message

When something peaks, it means that it cannot get higher than that peak. In this case, 40W. It doesn't go to 41 or higher without consequences.

Unless you're a hardcore metal-head though, I wouldn't worry about blowing the speakers out. 40W should be enough for the average listener.
