It's not a problem unless it's a problem. Pretty Zen, huh Barry?!!

But seriously, the reason I've always removed the paper backing is simply a matter that it isn't needed. It can make a "crinkly sound" if it vibrates against one of the cabinet panels. It just isn't needed and I don't want it to buzz. But honestly, at volume levels that might get that stuff buzzing, the music content is a ton louder than the sound the paper might make. So no, I wouldn't spend a day pulling it all out to remove the paper backing.

Now the sheets spanning the cross-section are a different story.
