You know Wayne I took the stepped attenuators out of my Foreplay; it was hard to get a good balance of output. The Gainclone can use either the 3785 or the 1875 chips. I used a toroidal transformer and hexfred rectifier diodes with Black Gate Electrolytics as a power supply. It can sound a little harsh on the real high freq. if you push it. With the Pi Theater 4's It never runs out of steam and very surprising how musical this thing sounds.If I ever get delivery of all the parts for the Death of Zen pre-amp I will report on that combination. What a pain gathering parts; something to be said for kits!
