gofar99 wrote on Mon, 28 August 2017 21:09 Essentially it all comes back to how valuable your equipment is and thus how much you are willing to pay to protect it ...or how much of a chance you are willing to take that you will never have a spike or surge.

Very true. There's no point of failing to use a small fraction of what the equipment cost to protect it. At times, the cost of repairing damaged equipment almost equals the cost of purchasing a new one.
