Hi Wayne

Found your excellent website! It has a ton of information for any noob DIY speaker builder like myself

I'd like to build something that is an update from my Beta 12CX coaxials with APT50 drivers. The Pi 3 seem like a good candidate, so can I have the 3 Pi plans please.

Trying to stay on a tight budget so I'll start off with the Delta 12LF and PSD2002 drivers. The waveguide will be a problem since I'm situated in Europe. I'll have to start with something like a JBL 338800-1 / Dayton H6512... Don't know what this will do to the sound?

Thanks for sharing your vast knowledge!

Mathias
