Hi Mabob,

Please listen to Wayne, you definitely need to get original horns from him, without it is not going to be a Pi 3 speaker at all, as it's crossover is fully based on H290C acoustic response!
So, if you can, do it correctly from the start-up to avoid wasting double money later on...

Best way to get Horns is to set-up account by cheaper forwarder (I did it by Myus.com) and ship way cheaper than usual shipping rates by Pi speakers.
Horns shipped from Wayne to USA forwarder where this summer 115,- Euro + shipping costs of forwarder to Europe (about ± 30,- Euro) so in total about ± 145,- Euro for one pair of H290C horns - not bad!

Also, very important, if possible try to order as well 2 x 100 WATT 8 Ohm power resistors from Wayne or Parts-express as this specific part is nowhere to be found in Europe!

Good luck with your new project, I'm almost ready with mine...
