Hi Mabob,

Please listen to Wayne, you definitely need to get original horns from him, without it is not going to be a Pi 3 speaker at all, as it's crossover is fully based on H290C acoustic response!

So, if you can, do it correctly from the start-up to avoid wasting double money later on...

Best way to get Horns is to set-up account by cheaper forwarder ( I did it by Myus.com ) and ship way cheaper than usual shipping rates by Pi speakers.

Horns shipped from Wayne to USA forwarder where this summer 115,- Euro + shipping costs of forwarder to Europe ( about ± 30,- Euro ) so in total about ± 145,- Euro for one pair of H290C horns - not bad!

Also, very important, if possible try to order as well 2 x 100 WATT 8 Ohm power resistors from Wayne or Parts-express as this specific part is nowhere to be found in Europe!

Good luck with your new project, I'm almost ready with mine...
