Subject: Ever wondered what makes tubes sound different from transistor amps? Posted by Adrian Mack on Fri, 14 Jan 2005 15:11:56 GMT View Forum Message <> Reply to Message

If so, then you should read this:http://users.ece.gatech.edu/~mleach/papers/TubeVsTrans.pdflt involves a series of AB tests on experienced guitar players in terms of judging frequency response, ripple distortion, electrical impedance effects, and a number of other areas. It actually turns out according to this article the main reason that a tube amp sounds so much different from solid state is the different frequency response created from the speaker impedance load.
