Hi all!

I want to convert my SLT 12 into a U-version.  
There is somebody who likes to build a headshell, but he needs  
infos.  
The original cartridge is glued in the headshell!

Now I need the measurements! It has to be in style close to the original.

Another question is if there is a difference in construction  
of both arms?  
I will remove the magnetic plate from the headshell and  
the housing.  
Will try to find another solution to keep the needle save.

Who can help?  
Any other forums deeper in vintage record players?

Thanks in advance!
