Dust particles can damage the vinyl surface by denting it or even becoming embedded in it when struck. So clean the surface of each record with a record cleaning kit before playing it. Store records in their sleeves standing vertically without anything on top of them. Keep them in a room that is temperature and humidity controlled. Never put them in a place that gets very hot or very cold.

I didn't know that they needed to be stored vertically. Why is that? Also, what kind of sleeves do you recommend? Are the poly sleeves the right way to go?
