Hello! I would like to request the 7pi plans.

I am an experienced subwoofer box builder, but am now about to build my first pair of floorstanders. I currently have 2 AE TD15m drivers, and am considering buying the midhorn flatpack with the included eminence driver to use as the mid. Currently using a JBL 2206 in a small ported box as midrange but would like something with a bit more finesse.

For the top end i have a pair of JBL 2450sl in 90x50 waveguides. Everything is currently crossed over active in a hodgepodge of three boxes sitting on top of each other for testing purposes.

Any general tips or experiences with the acoustic elegance drivers used in this design would help, but i dont mind blazing my own trail.

Thanks!

Tony
