Dude, I feel for you. I have used several machine shops over the years for chassis like that. Then I began to use Pactec cabinets which could be modified to suit. I've shipped literally hundreds of thousands of products in Pactec enclosures, mostly communications gear. But my stuff could be put into plastic boxes whereas yours can't.

I still have a lot of metal work done, but it's stuff like 6160 aluminum panels and plates (cooling systems for the 12Pi horns) and one-offs for various hobbies (like specialized hotrod car parts). I just have various shops bid the work if I need a production run done. For one-offs, I have a handful of local (Tulsa) shops that I've used over the years and I'm building a network in Northwest Arkansas. Two shops here can do light work.

One in particular might be useful for you, but then again, maybe not. Their distance to you might make them unattractive. They won't balk at the quantities you need though. They're a job shop. I've had them build me some brackets and machine some dowel rods out of stainless with specific holes drilled through them. So give 'em a shout and see. Tell 'em I sent you.

C Mayo, Inc.
