
Subject: Sound for small gym

I am providing the sound system for a fall festival/dance we are having in our school gym. The gym is fairly small and there is only about 5 feet of space beyond basketball court to the block walls. Will be setting up in the narrower side under the basket.

I will be using upgraded 4pi's as speakers placed on table against wall, toed in, about 15' to 20' apart.

Are room modes any different for a larger venue, or is everything just scaled up from your living room?

Thanks
Paul
