Hi Wayne, Unfortunately it is not yet available. We have been unable to secure a suitable chassis manufacturer. All that have reasonable prices want lots of over 100 per type. That puts it out of our range. Companies that will do 10-25 want almost $200 for each chassis. At that price we will end up costing as much as the stuff we want to beat. Our goal was and is to make high quality audio available at reasonable prices. The "improved" economy has hurt our ability to do that. Worse it is impacting existing products. Yes we could outsource to Asia, but we like being as much USA as we can. Since I figure you are good with a soldering iron....you can always DIY one. The project on the diyaudioprojects site and a similar one I have in Audio Express can lead to a great build. Not a novice project, but I figure you would have no trouble.
