Another aside:

On the matter of measuring cartridges, I found the article in the attached "Briel & Kjaer Technical Review" journal from 1976. Pages 25-34 discuss using an accelerometer to provide a signal for testing turntable cartridges.

Briel & Kjaer Technical Review, 1976, No. 2

This is what I was talking about, exactly. But it's really beyond the scope of this thread. Here I'm focused on examining the condition of the stylus tip, to know when to replace it. So I've sort of hijacked my own thread. :lol:

Cartridge measurement might be a worthwhile discussion in another thread though.
