Dear JohnyCamp,
Thank you for your kind words and suggestions.

I was impressed by logical approach of SBA concept and want to try that setup first time.

I will install basstrap wall for all surface of ceiling, backwall, sidewall.

The basstrap system I use is 700mm thick with multi-layers of different materials. It proved its ability to handle 25-30Hz with just its thinner version.

I want to make this room pass as many critical specs of ITU, Dolby, THX as possible with reasonable budget.

My previous rooms have passed many critical specs of ITU 2-ch listening room. But this is the first time I do surround sound.

I'm really excited to start on detailed design phase.

Bests,
Edwards
