I have a new speaker project. It's a pair of line arrays I'm calling the DE912a Arrays of Awesomeness. They are dipoles (open back) with twelve 7" Dayton Audio Esoteric series woofers and nine BG NEO8 PDR tweeters per side. Crossover, speaker correction, equalization, and room correction will be done by a DEQX pre amp processor. I'll be using four channels of an Emotiva XPR-5 amp to drive them. Each tower stands 7' 11" tall. They should respond down to about 120hz, so a subwoofer will be required.
