I still like physical copies. But for the millinials, MP3 downloads are the preferred delivery method, I suppose.

You can always buy music on Amazon. You can download it to your device(s) and they'll keep a copy of it in your cloud account too. Many physical media (like vinyl and CD) purchases come with a free digital copy, so you can download songs onto a USB flash drive to play in your car or any DAC with USB input.
