Augustus, since a television has both visual and audio components maybe it's just more fiddly. I'm not a DIY person and I come to this section to read and learn from you all. However, I've noticed that televisions involve different types of electrical components and lighting depending on the kind it is. LED, QLED, LCD, Smart TVs, it's just more specialized and maybe that has something to do with it.

Rusty, Smart TVs are becoming harder and harder to avoid.
