Purchased a Pi7 kit about 10 years ago but never assembled it. Now that I'm finally circling back around, I need some refreshers. My apologies if I re-ask frequent questions.

1) I swapped the originally 15" drivers for some JBL 2225H's. I seem to remember that the driver change to JBL required a crossover modification. Is that the case? If so, what is the modification?

2a) Speaking of crossovers, I have two 3-ways that I believe came with the kit. But there is also a bag of resistors (tie wrapped into parallel groups) with leads attached that I think also go with the kit. Was there a separate bag with leads, resistors, and terminals?

2b) Is the 10 year old crossover still a current revision or have updates been made during the past decade (the only identifier is the number 433)?

3) I bought the mid-horn flat pack back then. Are there any detailed assembly instructions for the mid horn? I'm having trouble puzzling it together.

Thanks.

It'll be good to finally put this together.
