Well, very "sharp" input/inverter part, direct coupling to diff. driver, feedback...To be honest, I never tried something like this and can`t comment on functionality/sound. But, I`m not that "hot" to try 3x12AU7 driver + UL 5881 output. My thinking is more on "big DHTs", class A, simple and "direct" driver/splitter with better tubes then 12AU7, no feedback amps.I know that it`s an "indirect" answer, but I really can`t say more about amp I just look at schematic for couple of minutes - especially `cos it`s a commercial product.
