Well, very "sharp" input/inverter part, direct coupling to diff. driver, feedback...To be honest, I never tried something like this and can't comment on functionality/sound. But, I'm not that "hot" to try 3x12AU7 driver + UL 5881 output. My thinking is more on "big DHTs", class A, simple and "direct" driver/splitter with better tubes than 12AU7, no feedback amps. I know that it's an "indirect" answer, but I really can't say more about amp I just look at schematic for couple of minutes - especially 'cos it's a commercial product.
