I've recently wondered too about a 12db crossover device having gotten a couple sub drivers recently. I've considered the mini dsp, but for the cheaper 2x4 the output is only 0.9 volts which probably wont drive the amplifier to full volume. Moving up to the HD 2x4 will give 2.0 volts, but is double the price, \$205. Thus being a budget minded fellow. I wonder if this product would fill the bill. It has a low level output and a mono sub output. Wonder if this would accommodate 2 subs.
