Subject: Re: Low Pass Posted by Wayne Parham on Thu, 14 Nov 2019 23:39:12 GMT View Forum Message <> Reply to Message

The 100Hz at 12dB/octave (2nd-order) slope recommendation is specifically for flanking subs, which are a type of multisub arrangement. Distributed multisubs are usually run lower and with a quicker slope, often 60Hz at 4th-order or 80Hz 4th-order. The best setups run both, with flanking subs up front by the mains and distributed multisubs at the other end of the room.
