The ones I've used haven't had any problems with interference or latency. Those kinds of problems would be show-stoppers to me.

You can always give one a try and if it doesn't satisfy, return it. That was my approach. I tried hanging some surrounds and connecting them with a little Rocketfish transmitter/receiver system. I figured if it suffered from dropouts or didn't sound good, I'd send it back. But it worked just great.
