Just completed my Four Pi speakers in Gorgeous American Walnut. Even veneered the port for a very finished look. Maxed out the crossovers, and these are heavily braced. Doubled the face for 1 1/2". I was lucky enough to get the parts from a guy that decided not to build them. All I can say from the first note, is that I knew I had something special! Honestly, the smoothest, best sounding horn I've heard to date. From my experience, making a horn sound smooth is no easy feat, and these are remarkable! Kudos to Wayne for designing a truly world class horn speaker. They seem to play just about everything very well, and if you want to rock, well Holy Sh%t!!! You will feel like the guy in the chair in the old Marantz ad, Older guys know what I'm talking about!! I am really glad I gave these speakers a try, and they deserve a quality cabinet, because they really are that good! Wayne, How do I get some Pi logos?
