as much as I hate the idea, I am going to run this one through the Bean Counter process and see how it shakes out with a good choke input PS, valve rectifier and top plate.It is an interesting exercise in economics, and worth it for purposes of entertainment for sure. To top it all off, depending on which Peerless output I decide to replicate, it can be entertaining on so many levels. This process also offers the chance to develope a proper BoM for later build exercises.cheers,Douglas
