Hi, has anyone used these on a Seas 15 inch horn and what did you think of the sound. I'm fiddling with a pair and trying to settle on a crossover. It seems that somewhere in the 2500-3000 range with 12 db/oct works well even though Radian says to use 1200 at 12db. Any thoughts? I have had to pad them down about 14 db to match with a Great Plains 15 inch (416-8B alnico)woofer. It is quite linear to nearly 4K HZ.
