No don't use motor oil. That's made for a totally different harsh environment. Use a lightweight oil like 3in1 oil, or do a simple search for turntable oil. It's amusing the amount of conjecture that arises on forums concerning this subject. On and on they go with this, that and the other. For something revolving around at the breakneck speed of 33 1/3 rpm per minute. Some may think they can hear the difference between various oils. Right?
