If you didn't buy anode chokes, Lundahl LL1667/15mA is about right for this purpose. It has  $L=270H$  and  $R_w=2k4$ . You'd need four LEDs in series for the new OP, about 160V/-6,8V/15mA. B+ stays the same, about 200V, but we have some voltage drop "through"  $R_w$ .
