If you didn't buy anode chokes, Lundahl LL1667/15mA is about right for this purpose. It has $L=270H$ and $R_w=2k4$. You'd need four LEDs in series for the new OP, about 160V/-6,8V/15mA. B+ stays the same, about 200V, but we have some voltage drop "through" R_w .
