Subject: 4 Pi Crossover

Hello Wayne,

Greetings. I've been enjoying my 4 Pi for over a decade until couple weeks ago while listening (at normal sound level) I noticed I was getting ear fatigue after 10 minutes from one ear. After switching left <> right speakers, my ear fatigue followed the speaker swap. So now I am focusing my troubleshooting on a speaker, most likely the speaker crossover.

While going through my saved crossover schematics (2Pi and 4Pi), for some reason, I can only find the original 4Pi schematic and not the updated version. Can you please send me the latest 4 Pi crossover schematic? Also, any suggestion as to which component could be the culprit?

My 4 Pi is made up of 2225H, DE250, and H290C. I also have 15 ohm across DE250 (added later for H290C).

Thanks in advance,
Norb
