I've been searching through AK threads. Consensus is that the drivers are CTS, so same as Magnavox. I have a 15" 4ohm but not sure what the Monet uses. My 8" mids seem original and are isolated in a cardboard tube (see pic). There are 3 x 4.5" tweeters!? Maybe this is some sort of impedance matching thing. The crossover is pretty simple. I see an air core inductor, a cap, and a resistor.

I see a guy on the AK forums who lives in Denver and has a pair. I'll reach out to him and see if he can provide some info on the parts I'd have to get. I found and attached a picture of how they should look.

John
