Subject: Volume knob for Stoetkit

Anyone know where to get a really nice volume knob for the Stoetkit? I have all good parts in my Stoetkit except the volume knob. It's stock and it sucks. Squeeks and scratches when you turn it. I've cleaned it a zillion times and it doesn't help. It's annoying, especially since everything else about the amp is excellent. I've put off replacing it because it is way up in the chassis and you have to perform surgery to get it out. But as soon as I get Epstein's radio running, this volume knob swap is next. Looking for a good replacement that is physically and electrically compatible. Suggestions?
