Thank you Wayne, that's the best mail I've received in a long time! It answers a lot of questions that have been floating around in my brain...and yet so many remain :p

Regarding the PRV Audio D290 Pv, it has an advertised sensitivity of 109 dB, which is really close to B&C DE 250's sensitivity of 108.5. At least in th ball park, eh?

I'm excited for this project. Thank you again, Wayne, for your generosity!

Regards,

Steve
