Subject: Older 4 Pi speakers

Hi Wayne and friends.
I recently gave a friend a bunch of stuff that was unused from an old Pi4 pair of speakers. These were based on Eminence Delta 15" drivers, and used Eminence crossovers with the lights. They also had an added cable for compatibility to PI design. This is really a blast from the past.

Here's the problem. I don't have the design sheets anymore. Did anybody save theirs? Any help is appreciated.
Steve
