Any thoughts on suitable mounting hardware for the 12PLB100s? I am trying to find suitable bolts and nuts.

I am a bit puzzled about the size I am supposed to choose. The 12PLB100s have a thick gasket on front made from some cork-like material. Is the screw head supposed to sit on top of this material or is it supposed to sit on the metal body beneath the gasket.

Any information including specs for the hardware would be great!

As an update the waveguides are being professionally treated with a very thin glossy black coating. I will post an update when available. These are going to be mounted with M5 bolts and nuts.
