Hi,

I'm really interested in building a pair of 8pis with a pair of 3pi subwoofers. I've done a light search of the forum and haven't found much on subwoofer amp recommendations.

Also, what crossover frequency would be recommended for such a setup? Am I correct in assuming that a matching high-pass filter is not recommended?

I'm planning to use these alongside an EL34/KT88/KT120 amp based on the Oddwatt designs.
