Hey Wayne, thanks for all the info.

I will reinforce the baffle cutout, I'll sleep better without the woofer hanging there off a 1/4" of mdf.

Online search seemed to indicate that the main difference rockwool vs fibreglass for speaker applications is that the rockwool is quite a bit denser - likely blocks air/soundwaves more than expected in the design. In your opinion would you expect that to be neutral or a negative overall? (I don't have a proper near-field mic to build it and test it properly unfortunately)

I don't mind going and buying fibreglass if you think using the rockwool is a bad idea. It would be R12 pink fibreglass at 3.5" thick.

cheers,
Jake
