I originally wanted to build an econowave but the more I think about it I sort of feel like I'd rather spend the extra $$ to get the real deal. (I do have to convince the wife first either way!)

I've read the FAQ, but surely there is more difference than brand preference. I know I'd like to build the highest end version of either. Surprisingly, the 4 is smaller and more expensive but the bass seems to be better on the 3.

Other factors:
I plan to run without a sub for a while.
One speaker is stuck in a corner, the other is not

Thanks!
