I wanted to get your opinion on the amount of room I have. I modeled up the corner that the left speaker would be stuck in and... it's tight.

The 4pi is correct dimensions. I wasn't sure how big the 3pi sub was, so I made it a 14" cube. Either way, I think I would have to make the sub shallower and taller to fit back there. Let me know what you think! Thanks!

Actual Picture (there is a rug now!)

Iso, front, and top vies
