Are the Penta tubes manufactured by Psvane Bruce?

I do not know how old these tubes are.

Supposively not many hours.

Metal band around bottom is hanging/extremely loose on one tube.

No red plating is occuring. I am running the idle plate dissipation around 30 watts, in triode mode, so includes the screen, and the output is around 20 watts. So not a real test of the quad given your information.

The bass is shy to me, midrange sounds great though, but I can't pull the trigger on them. They are loaned to me, so not out money for this test.

Cheers and thanks for the info Bruce.
