Alright, I got the go ahead to build the 4pi. Can I have the plans please?

I need to put grills on, I was thinking of embedding magnets in the front. Do I need a 'frame' around the grills to hold them in place and deal with edge diffractions, or is there a better route to take? I don't want my 19 mo toddler to push in my dust caps!

I think no matter how I slice it, the 3pi subs are going to be too big. I think I'll run them as is for a bit, and see how much room I'm left with for subs down the road. Luckily, physics is on my side and I don't need an efficient sub because I have a Carver 900w amp laying around...

Thanks!
