Hello Wayne, first of all thank you for your availability and patience. I'm Paolo and I'm making two of your projects, the Two pi and the Four pi. I have a couple of questions for you: what is the minimum cabinet volume to use for both speakers? Even playing with the absorbent material. The other question: is it possible to use a cheaper tweeter on Four pi? For example Eminence ASD 1001? I know that you rightly don't like these questions, because it speaks of projects that are not yours, but allow me to ask you. Thanks in advance and greetings to you and to everyone from Como, Italy.
