Hi Pos, I can assist with the 39, 47 and 51. My LCR says the first two sizes are really close the 51s measure closer to to 50.2 ohms though. They are supposed to be 1/2 watt size but look small. Then again new resistors tend to be smaller anyhow. The 523 you will have to make up with some combination. I'll see if I can pair some up for you (I'll get back later as the program is in a VM in my PC) The others are yours no charge, just let me know where to send them. PM me with the address.
