Spearheading the LSAF 2024 demo system of PureArtFi, Miller Audio LLC, and Audio Crafters Guild will be the LS-6 monitor. A full range standmount combining the breakthrough Purifi loudspeaker drivers with master level cabinet work the LS-6 redefines its category. Yes a bold statement, drop by our room at LSAF in Dallas June 7-9 and hear for yourself. The PureArtFi LS-6 is a collaboration between master cabinet maker Paul Stover and audio designer Norman Tracy. The extreme cabinet resonance suppression measures Tracy's designs require dovetail perfectly with the solid hardwoods and precision fabrication Stover's decades serving the high end homebuilding industry in Colorado provide. The LS-6 pair slated for demo at LSAF feature solid walnut front baffles and stand plates along with shop sawn 1/8" thick spalted hackberry veneered enclosures. Hidden inside the square edge modern enclosures are potted crossovers and limp mass damping elements addressing mechanical and acoustics resonances. Quieting those driver reaction forces noise sources further reveal the musical effects of the Purifi's breakthrough reductions of distortion and other non-linear behaviors.
